

System Analysis and Design - Tutorial

Introduction to SAD

1. Assume that you are going to develop a computer application for a medical center. You can assume that this system will assist to
 - a. register patients,
 - b. make doctor appointments,
 - c. maintain patient history records,
 - d. medicine registration and
 - e. maintain medicine issue records

Describe how you will perform this development work according to the SDLC. Discuss the activities that you must perform in each stage. You can make own assumptions in your discussion.
